

Practical No. 5

Aim: Implement Gradient Descent Algorithm.

Problem Statement : Develop a program in Python to create a Gradient Descent. Example by hand:

Code:

```
In [2]: x = 2
        lr = 0.01
        precision = 0.000001
        previous step size = 1
        max iter = 10000
        iters = 0
        gf = lambda x: (x + 3) ** 2
In [3]: import matplotlib.pyplot as plt
In [4]: gd = []
In [5]: while precision < previous_step_size and iters < max_iter:</pre>
            prev = x
            x = x - lr * gf(prev)
            previous_step_size = abs (x - prev)
            iters += 1
            print('Iterations : ', iters, 'Value : ',x)
            gd.append(x)
```
